

Flexible Facility Network

Your supply chain needs are as unique as your business – and they do not fit directly into any single supply chain company's network. That's why XPO doesn't try to adapt our clients to fit our in-house facilities. Instead, we work with each client to craft an individual solution.

Through a combination of company-operated and third-party partners, XPO offers a vast footprint of North American facility options, including warehouses, fulfillment centers, port transloads and cross-docks. We start with an analysis of your needs, rather than a goal of getting your business into our own facilities, and we identify the locations that are best for your efficiency and cost goals.

What storage capabilities and classifications are available?

XPO has the scale and capabilities to offer customized solutions to meet your needs. Our flexible facility network covers a wide range of capabilities, including:

- E-commerce fulfillment
- Cross-docking
- Seamless container transloading
- Assembly
- Pick-n-pack
- Long-term racked storage

Storage classifications include:

- Food-grade
- Temperature controlled
- Bonded
- FTZ
- Hazmat

How are locations selected?

XPO's logistics engineering specialists will meet with you to understand your requirements and analyze your data. We start with the desired outcome and work upstream to develop a unique supply chain service. Through this comprehensive approach, we will identify the right locations to minimize cost and maximize service. This level of expertise and focus, combined with the power of XPO's global transportation grid, allows us to create cost-effective and dependable solutions for your organization.

How does XPO bring all these storage facilities together in one program?

Regardless of which facilities are chosen to provide your direct service, XPO will manage the whole program through a centralized control tower. This means that you work with a single point of contact, and all transactional data is centralized through EDI or inventory scanning.
